axcorn's Scout
for Consultants & Auditors

BuildingScout for you and your clients

It can be quite challenging to orient oneself as an external person in an unfamiliar organization. Simultaneously it is important to quickly document observations in an orderly structure and to relate information to the location. Our cloud computing solutions, that is available anywhere at any time, particularly facilitates mobile work steps greatly. Consultants, Auditors or Coaches digitalize and simplify processes all around checks and observations on site. Furthermore it improves the quality of the services and it is also accessible to the client as a common tool for continuous collaboration.

Only a mobile device and a BuildingScout Account is needed. You ca start immediately. Tour your sites and buildings and benefit from working with your digital building plan and smart Data Points providing a quick selection of profiles to support each of your use cases.

Fachexpertise
Umwelt | Energie | Sicherheit

Safety checked, Compliance OK!

A safety officer locates work areas in a workshop where health risks occur. The „Hot Spots" are documented with BuildingScout. Preventive measures are coordinated in the portal. Responsible personnel receives required tasks on the smartphone

The Environment & Savings in Sight!

An environmental auditor tours the documented issues of the last inspection and environmental relevant facilities. BuildingScout indicates the locations and detailed information. Check list and audit results are integrated in the System and online instantly.

Checks in a consulting process
## You use your Smartphone

Capture the situation in your client's organization on digital building plans quickly and share it with the client's responsible groups.
Consultant and client, both have access. Thereby the consultant is able to throughout monitor the implementation or provide guidance to the client remotely.

Structured and quicker work flow: When collecting and processing information users profit from profiles of each thematic module.

- e.g. energetic situation: specific machines/facilities (ISO50001, DIN EN 16247-1 supported)
- e.g. safety issues: tools and machinery, workers, work stations, materials (legal requirements supported)
- e.g. environmental aspects in work processes: water, soil, emissions etc. (EMAS/ ISO14001 supported)
