

# Quick & Professional with Profile Boxes

## Thematic profiles for efficient application

The usability of BuildingScout is as easy as other apps, at the same time visual as well as issue-specific support at a high level are the true benefits. Using digital building plans and modules with various profiles for each use case, non-specialists receive guidance, the process is speed up due to quick selections, and content and documentation is effectively structured.

## Quick Selection & Individual

Depending on the use case a thematic profile is assigned to each Data Point that can be completed with an evaluation and further information. Playfully Data Points can be used further or shared flexibly with users.

## Use Cases

### Environment

Emissions, Energy, Waste, Biodiversity, Water, Emergency Preparedness  
Most important aspects for organizational Environmental Management

### Safety

Groups of safety risks and hazardous materials  
Compliance-Checks and the most important organizational Safety Issues

### Building-Check

Building structure, components, services areas, energy, sustainability criteria  
Checks of the building's status: qualitative assessment, due diligence, energetic evaluation

### Energy & CO<sub>2</sub>

Energy consumers, building components and systems, processes, work stations  
Energy savings are possible everywhere: e.g. lightings, HVAC, compressed air, pumps, work stations, insulations, measuring points

### Crowd

Involving many actors in a project or all staff members permanently  
All users of a building or responsible persons can be integrated or communicate issues through the system

### Basic

Introduction into Environment & Sustainability, Safety, Energy & Climate Protection, Machines & Defects, Hygiene, Office Supplies

Data records can be exported as CSV
